EC-1700

Combination of mechanism and air **338** types of massage

The basic actions of the massage balls combined with air massage have made it possible to deliver a more varied and fine 338 types of massage.

Unique Function

KIWAMIMECHA Massage

Neck massage

The massage balls improve blood circulation around the neck by gripping and stretching the nape.

Super Knead / Super Tapping

The tightness in the trapezius is relieved by providing deep stimulation to the upper part of the shoulders.

Super Back Knead / Super Back Tapping / Buttocks Massage

These functions are effective in soothing the soreness caused by the strain in the back or buttocks, neuralgia and muscle ache.

Unique Function

Loosening Massage

Knead & Tapping Automatic Variable Function

A new sensation a machine could not provide before. A manual-like massage makes it possible to provide a fine and rhythmical massage. Tension is gently released by the changeable rhythm instead of a steady mechanical rhythm.

Knead

The kneading sensation feels very much like a real massage.

Relaxes the whole area from the shoulders to the waist.

Tapping

By controlling the speed of pounding and changing it gradually, it provides an effective massage as the body acclimatizes to it.

Massage at your convenience without having to take your shoes off.

Leg Massager

It promotes a better circulation of blood in the legs by firmly taking hold of the calves with the air bags. It is equipped with a variety of functions such as its unique Cross-press system.

Unique Function

Milking Action

The milking action sends blood back to the heart by pressurizing the blood vessels. Lack of exercise and staying in the same position for many hours cause the muscles in the legs to weaken, resulting in swelling or tiredness.

Legs are firmly held and slowly stretched

Leg Stretch

The Stretch Massage uses the air bags to hold the calves and slowly pulling them downward. It promotes a better circulation of blood in the legs, which are prone to swelling.
